

Examples of International Agency for Research on Cancer (IARC) Carcinogenic Classifications

Hair coloring products

Insulation glass wool

Caffeine/Tea

Fluorescent lighting

Caprolactam

Note: Of the hundreds of agents IARC has reviewed, this chemical, primarily used in the manufacturing of synthetic fibers, especially nylon, is the ONLY item IARC has ever placed in this category.³

Magnetic fields

Coffee

Aloe vera

Carpentry

Pickled vegetables (traditional in Asia)

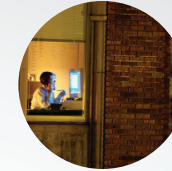

Talc-based body powder

Working as a barber/hair dresser

Glyphosate

Nightshift work

High temperature frying

Red meat

Tobacco

Wood dust

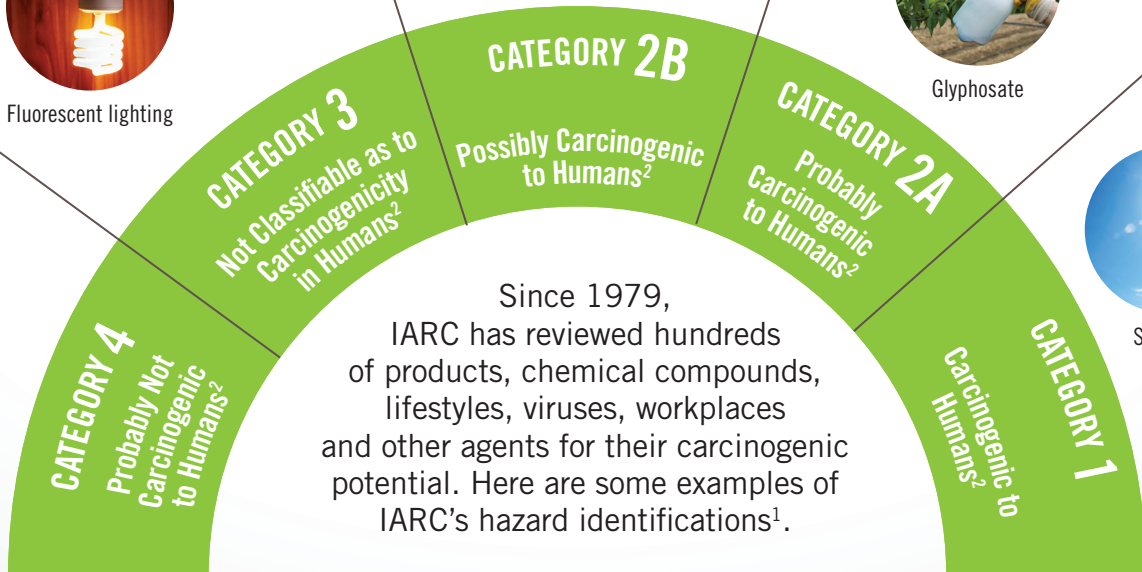

Sunlight

Processed meat

Alcoholic beverages

Since 1979, IARC has reviewed hundreds of products, chemical compounds, lifestyles, viruses, workplaces and other agents for their carcinogenic potential. Here are some examples of IARC's hazard identifications¹.
